NAME OF OFFEROR OR CONTRACTOR

A1. Once existing stone and subgrade soils are removed to a depth sufficient to place 6 inches of three-quarter inch (3/4 inch) stone beneath areas to be paved, subgrade soils shall be compacted four times with a walk-behind vibratory compactor. Following subgrade compaction, install the Mirafi 500X Geotextile fabric and three-quarter inch (3/4 inch) stone. Compact three-quarter inch (3/4 inch) stone four times with a walk-behind vibratory compactor. Q2. Plans and specifications require removal of existing three-quarter inch (3/4 inch) stone and subgrade soil and placing them in separate stockpiles. Can the three-quarter inch (3/4inch) stone be reused or is new material required for the 6 inch lift to be placed in the building? A2. Existing three-quarter inch (3/4 inch) stone and subgrade soils shall be removed to the depth required for installation of stone meeting the requirements of Specification Section 02200

	Q8. At the site visit it was stated that the				
	Government would perform acceptance testing of				
	the asphalt, including taking of and testing of a				
	core sample. Paragraph 11 on page 7 states that				
	the contractor shall take the core sample and				
	provide the results of the testing to the				
	Government.				
	A8. 8. The Government will take a core sample of				
	the asphalt pavement from an unobtrusive location				
	for acceptance testing (95% of Maximum				
	Theoretical Density, RICE analysis, as determined				
	by ASTM D 2041) following completion of the				
	paving. The Contractor may, at Contractor's				
	expense, take in-place density tests of the				
	asphalt pavement as the work progresses to assure				
	himself that the compaction and rolling equipment				
	is adequate and achieving the specified asphalt				
	pavement density.
